Evidence based medicine is the conscientious, explicit, and judicious use of current best evidence in making decisions about the care of individual patients. The practice of evidence based medicine means integrating individual clinical expertise with the best available external clinical evidence from systematic research.

--David Sacket [and others] Evidence based medicine: what it is and what it isn't. *BMJ* 1996; 312: 71-2

Practice Recommendations

Practice recommendations are statements, supported by evidence, that guide physicians in making choices about specific practice behaviors. Practice recommendations must be consistent with the results of a systematic review of evidence conducted by a recognized evidence based medicine (EBM) source and consistent with the clinical content of the CME activity.
